

Course 6 - Sprint 1: Design Database using ER Diagram by applying Normalization

Problem Statement: C6S1PC1.1 – Standard Bank

Charles is a newly appointed Database Administrator at Standard bank. The management of this bank wants to computerize the process of banking. According to the bank's policy, one can have many accounts, but one account cannot be shared by many customers. Identify the entities, their attributes and the type of relationship between the entities.

Please Note:
